

Application No. 10/085,333
 Amendment dated December 15, 2003
 Reply to Office Action of December 8, 2003

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-7 (cancelled)

Claim 8 (previously presented): A column for providing a vertical support to a building, the column comprising:

a concrete foundation column for planting in an area of earth, a proximal end of said foundation column protruding from said earth when said concrete foundation column is planted therein; and

a wood column, said wood column secured to said proximal end of said concrete foundation column, said wood column substantially vertically oriented, wherein said foundation column includes at least one reinforcing bar therein, wherein a proximal end of said reinforcing bar is affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, said wood column positioned intermediate said arms, said wood column secured to said foundation columns via said column bracket.

Application No. 10/085,333
Amendment dated December 15, 2003
Reply to Office Action of December 8, 2003

Same as 9

Claim 9 (previously presented): A column for providing a vertical support to a building, the column comprising:

a concrete foundation column for planting in an area of earth, a proximal end of said foundation column protruding from said earth when said concrete foundation column is planted therein; and

a wood column, said wood column secured to said proximal end of said concrete foundation column, said wood column substantially vertically oriented, wherein said foundation column includes at least one U-shaped reinforcing bar therein, wherein said U-shaped reinforcing bar has a pair of ends, said pair of ends affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, said wood column positioned intermediate said arms, said wood column secured to said foundation columns via said column bracket.

Same as 10

Claim 10 (previously presented): A column for providing a vertical support to a building, the column comprising:

a concrete foundation column for planting in an area of earth, a proximal end of said foundation column protruding from said earth when said concrete foundation column is planted therein; and

a wood column, said wood column secured to said proximal end of said concrete foundation column, said wood column substantially vertically oriented, wherein said foundation column includes four reinforcing bars, said reinforcing bars substantially evenly spaced about a longitudinal axis of said foundation column, wherein a proximal end of each said reinforcing bar is affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a

pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, said wood column positioned intermediate said arms, said wood column secured to said foundation columns via said column bracket, said foundation column having a plurality of reinforcing bar spacers, each said reinforcing bar spacer affixed to an adjacent pair of reinforcing bars, said reinforcing bar spacers affixed to a substantially distal end of said reinforcing bars.

103 412/60 100 4192/16

Claim 11 (previously presented): A column for providing a vertical support to a building, the column comprising:

a concrete foundation column for planting in an area of earth, a proximal end of said foundation column protruding from said earth when said concrete foundation column is planted therein; and

a wood column, said wood column secured to said proximal end of said concrete foundation column, said wood column substantially vertically oriented, wherein said foundation column includes a ¹⁰column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a ¹⁴base and a pair of depending ^{12,23}arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, said wood column positioned intermediate said arms, said wood column secured to said foundation columns via said column bracket.

Claims 12 - 22 (cancelled)

b'g
See as 11-8
Claim 23 (previously presented): A post-frame building, comprising:

a plurality of concrete¹¹ foundation columns, each said foundation column planted in an area of earth, a proximal end of each said concrete foundation column protruding from said earth;

¹³
a plurality of wood columns, said columns secured to said proximal ends of said concrete foundation columns; and

²⁰
a roofing member attached to said columns, said roofing member defining an exterior²³ roof of the building, said roofing member substantially entirely covering a foot print of the building;

wherein each said foundation column comprises a precast concrete column;

repeat HC of old ref.
wherein each said foundation column contains at least one reinforcing bar therein; and wherein a proximal end of said reinforcing bar is affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, one of said wood columns positioned intermediate said arms, said wood columns secured to said foundation columns via said column bracket.

See as 9
Claim 24 (previously presented): A post-frame building, comprising:

a plurality of concrete¹¹ foundation columns, each said foundation column planted in an area of earth, a proximal end of each said concrete foundation column protruding from said earth;

¹³
a plurality of wood columns, said columns secured to said proximal ends of said concrete foundation columns; and

Application No. 10/085,333
 Amendment dated December 15, 2003
 Reply to Office Action of December 8, 2003

b1 cont
 a roofing member attached to said columns, said roofing member defining an exterior roof of the building, said roofing member substantially entirely covering a foot print of the building;

wherein each said foundation column comprises *replaces 6 of pre reg.* a precast concrete column;

wherein each said foundation column contains at least one U-shaped reinforcing bar therein; and wherein said U-shaped reinforcing bar has a pair of ends, said pair of ends affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, one of said wood columns positioned intermediate said arms, said wood columns secured to said foundation columns via said column bracket.

Sheet 10

Claim 25 (previously presented): A post-frame building, comprising:

a plurality of concrete foundation columns, each said foundation column planted in an area of earth, a proximal end of each said concrete foundation column protruding from said earth;

a plurality of wood columns, said columns secured to said proximal ends of said concrete foundation columns; and

a roofing member attached to said columns, said roofing member defining an exterior roof of the building, said roofing member substantially entirely covering a foot print of the building;

wherein each said foundation column comprises *replaces 4 6 of old reg.* a precast concrete column;

wherein each said foundation column contains four reinforcing bars, said reinforcing bars substantially evenly spaced about a longitudinal axis of said foundation column; and

wherein a proximal end of each said reinforcing bar is affixed to a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation

column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, one of said wood columns positioned intermediate said arms, said wood columns secured to said foundation columns via said column bracket, said foundation column having a plurality of reinforcing bar spacers, each said reinforcing bar spacer affixed to an adjacent pair of reinforcing bars, said reinforcing bar spacers affixed to a substantially distal end of said reinforcing bars.

Some is claim 11

Claim 26 (previously presented): A post-frame building, comprising:

a plurality of concrete foundation columns, each said foundation column planted in an area of earth, a proximal end of each said concrete foundation column protruding from said earth;

a plurality of wood columns, said columns secured to said proximal ends of said concrete foundation columns; and

a roofing member attached to said columns, said roofing member defining an exterior roof of the building, said roofing member substantially entirely covering a foot print of the building, wherein each said-foundation column includes a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, one of said wood columns positioned intermediate said arms, said wood columns secured to said foundation columns via said column bracket.

Claims 27-28 (cancelled)

Application No. 10/085,333
Amendment dated December 15, 2003
Reply to Office Action of December 8, 2003

107 as claimed

Claim 29 (currently amended): A method of constructing a post-frame building, comprising:
planting a plurality of concrete foundation columns in the earth about a perimeter of the building;

affixing a wood column to each said foundation column, said wood column being substantially vertically oriented when affixed to said foundation column; and
constructing the building using the wood columns as vertical supports, wherein each said foundation column contains at least one reinforcing bar therein.

103 as claimed

Claim 30 (currently amended): A method of constructing a post-frame building, comprising:
planting a plurality of concrete foundation columns in the earth about a perimeter of the building;

affixing a wood column to each said foundation column, said wood column being substantially vertically oriented when affixed to said foundation column; and
constructing the building using the wood columns as vertical supports, wherein each said foundation column contains at least one U-shaped reinforcing bar therein.

103 as claimed

Claim 31 (currently amended): A method of constructing a post-frame building, comprising:
planting a plurality of concrete foundation columns in the earth about a perimeter of the building;

affixing a wood column to each said foundation column, said wood column being substantially vertically oriented when affixed to said foundation column; and
constructing the building using the wood columns as vertical supports, wherein each said foundation column contains four reinforcing bars, said reinforcing bars substantially evenly spaced about a longitudinal axis of said foundation column.

103 as claimed

Claim 32 (original): The method of Claim 29, wherein a proximal end of said reinforcing bar is affixed to a column bracket, said column bracket positioned adjacent a proximal end of a

conf
127 as Claim 11
Claim 35 (previously presented): A method of constructing a post-frame building, comprising:
planting a plurality of concrete foundation columns in the earth about a perimeter of the building;

affixing a wood column to each said foundation column, said wood column being substantially vertically oriented when affixed to foundation column; and

constructing the building using the wood columns as vertical supports, wherein said foundation column includes a column bracket, said column bracket positioned adjacent a proximal end of a concrete column body of said foundation column, said column bracket comprising a base and a pair of depending arms extending from said base, said base positioned adjacent said proximal end of said concrete column body of said foundation column, said arms extending proximally from said proximal end of said concrete column body, and wherein said step of affixing a wood column to each said foundation column comprises the steps of:

positioning said wood column intermediate said arms; and
securing said wood column to said foundation columns via said column bracket.
